

Product Requirements Document

1. Document Control

Product / Feature Name	Nota – Installment Management System
Version	v0.2
Author(s)	Doaa Alaaelden
Date	06/08/2026
Status	Approved

2. Overview / Summary

We will build Nota, a tool that allows the user to manage clients, products, and installment contracts in an easy way. The system lets the user add, update, delete, and view clients, products, and contracts; search for clients and products; and record payments. The user sets a balance at sign-up (editable/toppable-up later), which the system checks before allowing a new contract to be created — the balance then decreases by that contract's remaining amount and increases as the client pays. The system also provides a dashboard of the business's analysis in a quick, consistent, readable, and usable way.

3. Goals & Objectives

- Allow the user to see, add, update, and delete clients
- Allow the user to see, add, update, and delete products
- Allow the user to see, add, update, and delete contracts
- Allow the user to search for clients and products
- Allow the user to set and edit/top-up their balance
- Check the user's balance before allowing a new contract to be created
- Allow the user to record payments against a contract
- Automatically track the user's balance (decreases by a contract's remaining amount on creation, increases when a client payment is made)
- Allow the user to see a dashboard of system analysis

3.1 Non-Goals

- Filtration mechanism — Note: filtration is not included in this version
- Notify the client on due date
- Allow external users to use the system
- Using AI techniques
- Online/external payment processing

4. User Stories / Use Cases

ID	As a...	I want to...	Priority
US-01	User	Add, delete, see, and edit clients	High
US-02	User	Add, delete, see, and edit products	High
US-03	User	Add, delete, see, and edit contracts	High
US-04	User	Search for clients and products	Medium
US-05	User	Set my balance at sign-up and edit/top it up later	High
US-06	User	Be blocked from creating a contract if my balance is insufficient	High
US-07	User	Record a payment against a contract	High

US-08	User	See my balance update automatically when a contract is created or a payment is made	High
US-09	User	See the system dashboard/analysis	High

5. Functional Requirements

ID	Requirement	Priority
FR-01	User login	Must
FR-02	CRUD operations for clients	Must
FR-03	CRUD operations for products	Must
FR-04	CRUD operations for contracts	Must
FR-05	Search mechanism for clients and products	Should
FR-06	User sets balance at sign-up; can edit/top it up	Must
FR-07	Balance check that blocks contract creation when balance is insufficient	Must
FR-08	Record payments against a contract	Must
FR-09	Automatic balance calculation (decrease by contract's remaining amount on creation, increase on client payment)	Must
FR-10	Dashboard creation (clients, products, contracts, sales, collected, remaining, due today, overdue, monthly profit, expected amount)	Must

6. Non-Functional Requirements

Category	Requirement
Performance	Use lightweight/lite tools
Scalability	Use a good SQL tool and build a good schema
Security	Use hard validation and hashed credentials
Usability	Use a small number of pages
Availability	Use a good server
